Introduction

The **Topalian Game Engine Data Navigator** is a **JS, HTML, CSS** Application designed to organize and display hundreds of thousands of pieces of information, including **video, audio, images, text, links,** and **web pages.**

The Topalian Game Engine Data Navigator is a **100% PURE JAVASCRIPT** Application. There are NO other libraries used.

This JAVASCRIPT APPLICATION is useful for:

- ➔ Professional Investigators (police, fbi, M.I. etc)
- ➔ Teachers/Students (All levels)
- ➔ Musicians, Artists, Scientists in all fields

Features

Moving Character that Explores the Data

Abilities:

- ✓ ☀ Player Moves in All Directions Smoothly
- ✓ 📹 Camera Follows Player Around the World
- ✓ 🏃 Speeds - Very Slow to Extremely Fast
- ✓ ○ ● Transparent or Solid Player Body
- ✓ ✎ Mouse Position of where Player clicks on the screen

Play Video and Audio

From:

- ✓ Internet URL address as a LINK you visit
- ✓ Internet URL address as an Embedded video on the page
- ✓ File on your computer
- ✓ File on a Server

Video and Audio Playback Features: 📹 🎵 📺 📷

- ✓ 🏃 Speed Buttons of 100%, 75%, 50%, 25%, 10%
- ✓ > || Play/Pause, **Spacebar**, or **K**
- ✓ ⌚ Set the Start and End Time
- ✓ ⌚ Set Only the Start Time
- ✓ ⌚ Set Only the End Time
- ✓ ↺ Continuous Play or ⌚ Isolation Mode

- ✓ ↕ Resize Player to Any Size you Want
- ✓ → Forward One Frame, **period** when video is paused
- ✓ ← Backward One Frame, **comma** when video is paused
- ✓ ⏴ Slow Video Down by 25% with **Shift + Comma**
- ✓ ⏵ Speed the Video Up by 25% with **Shift + Period**
- ✓ 🔊 Mute the Video with **M**
- ✓ 🔊 Decrease Video Volume with **Down Arrow**
- ✓ 🔊 Increase Video Volume with **Up Arrow**
- ✓ ← Backwards 5 Seconds with **Left Arrow**
- ✓ → Forwards 5 Seconds with **Right Arrow**
- ✓ ← Backwards 10 Seconds with **J**
- ✓ → Forwards 10 Seconds with **L**
- ✓ 🖱️ Position the Video and/or Audio File Any Where on the Page
- ✓ Go to the Source of the Youtube Video by clicking the Youtube Logo
- ✓ Full Screen Video for Youtube, after you click the Youtube Logo
- ✓ Full Screen for Videos in Folder or Server, Click bottom right square
- ✓ Close Captions by clicking on the **CC** button

Organizing/Sorting/Filtering

Sort the Data: ASCENDING AND DESCENDING (Low to High, High to Low)

- ✓ Alphabetically
- ✓ Alphanumerically
- ✓ Date
- ✓ Month
- ✓ Day
- ✓ Year
- ✓ Month and Day
- ✓ Month and Year
- ✓ Multiple Years
- ✓ Multiple Months
- ✓ Multiple Years and Months
- ✓ Time of Day

Interface

Abilities

- ✓ Zoom IN/OUT to any setting that your web browser allows
- ✓ Print Any Div on the Screen
- ✓ Video, Audio, Images, Text, Links, Style Sheets may be used, since we are using Javascript, HTML and CSS.
- ✓ Data is Laid out in Rows - You Decide where to place the Row
- ✓ Load Data On Page Load, Crossing Specific Points and Push Button
- ✓ Deleting Divs
- ✓ Use the Web Browser Console to Debug Any Additions Made
- ✓ Window Abilities, Minimize, Maximize, Resize
- ✓ Advanced Video and Audio Controls - See Video/Audio Features

Websites onto the Page

Entire Websites can be loaded onto your web page, but those website **MUST ALLOW IFRAME!**

If the website allows iframe, then you can use an iframe to place that website onto your web page.

Keep in mind that some websites will effect loading time if you load them at the start of the application. If a website takes much time to load, then it is a good idea to allow the user the choice of loading it or not, by using a push button option to load the content.

The functionality of the website will be the same on your webpage.

News Articles

Displaying a Row of News Articles is easy.

```
let videoEvidence =  
[  
  { headline:"Bill Gates Met With JeffreyEps  
    tein Many Times, Despite His Past",  
    date:"10/12/2019 12:00 AM", url : "https://  
    www.nytimes.com/2019/10/12/business/  
    jeffrey-epstein-bill-gates.html", tag  
    : "news", description:"epstein"},  
  {  
    headline:"Twitter cracks down on QAnon,  
    will ban thousands of accounts", date  
    : "07/21/2020 12:00 AM", url:"https://  
    fortune.com/2020/07/21/twitter-qanon-  
    accounts-banned-crackdown/", tag:"news",  
    description:"qanon"}  
];
```

As you can see above, we have an object, made of keys and values.

The keys are **headline**, **date**, **url**, **tag** and **description**.

The values of those keys are written after the colon symbol :

Do NOT use double quotes in a headline or other key value. The double quote is used to end the string value, so if you use the double quote in the value itself, it would end the string, before we wanted it to be ended.

Entries are sorted by the DATE

```
date:"10/12/2019 12:00 AM"
```

Timeline Generation

All Items are Sorted by Date other criteria, such as name or number.

This makes INVESTIGATIONS much easier!

Now, every clue can be placed on a timeline automatically!

You can include the text, date, time, location, images, videos, map links, news links, etc.

Making Custom Row Functions is very easy too.

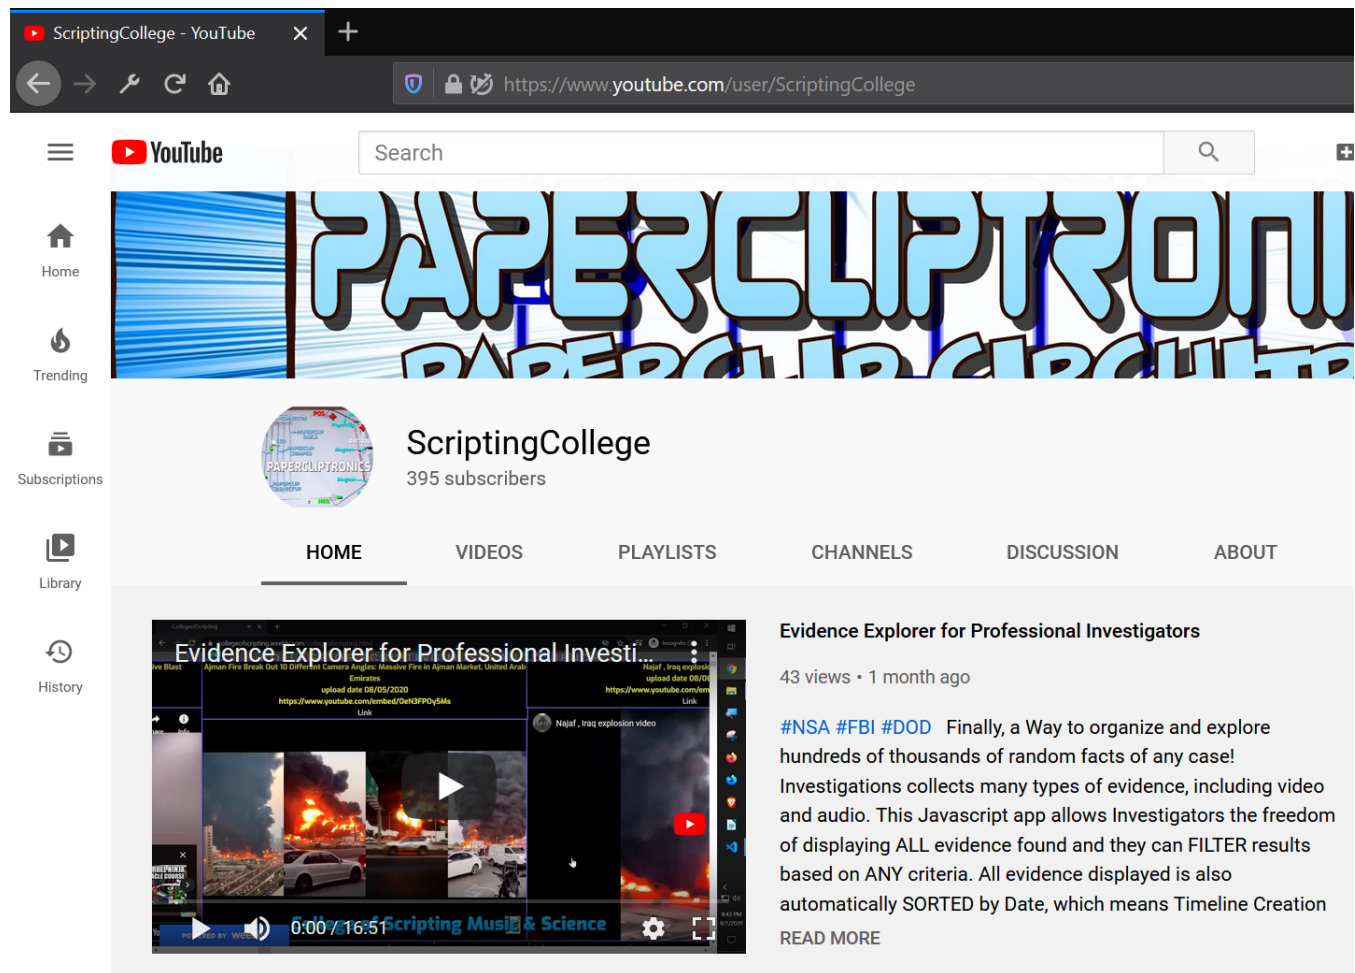

All Investigations are unique and that is one of the many reasons why Javascript is chosen for this task.

Javascript allows investigators the flexibility in designing their own functions to organize and display the data in any way that they decide is useful for their purposes.

Video Instruction on Using the App

Watch detailed video instruction on how to turn your spreadsheet data into Javascript format and learn the many features available to you.

/* Adds videos to the page
 the videos must allow embed
 on youtube, you copy the url in the Address Bar
 for example <https://www.youtube.com/watch?v=Q4tPG-cwiWE>
 now you just replace watch?v= with embed/
 for example <https://www.youtube.com/embed/Q4tPG-cwiWE>

```

CODE TopalianSpreadsheetToJavascript015.html

<!-- Dedicated to God the Father -->

<!-- All Rights Reserved Christopher Topalian Copyright 2020 -->

<!-- Topalian Spreadsheet To Javascript -->

<!-- Open this page in your web browser -->

<!-- Paste your spreadsheet data into the text area -->

<!-- Copy the converted text that appears on the screen -->

<!-- Paste the converted text into TopalianData.js -->

<!-- The spreadsheet data we paste is ONE Array of Objects at a time
which means one spreadsheet at time -->

<!-- For example, we can paste the spreadsheet named theNews into theNews
array of TopalianData.js. Then we would paste the videoEvidence spreadsheet
into the videoEvidence array of TopalianData.js. We update data one
spreadsheet at a time. We do this because each array is different and has
different requirements -->

<!-- This script makes it very easy to add data to our game/website.

We add the data to our spreadsheet, which we can sort anyway we want
using the spreadsheet tools. Then we just convert that spreadsheet data to
javascript format using this script here, and we paste the converted data into
our TopalianData.js file, one spreadsheet at a time into one array at a time -->

<!-- If your title or name has a double quote " change the double quote to a
single quote instead, because we are already using double quotes to contain
each string -->

<!-- CORRECT: "Earth 'seems' nice"

NOT CORRECT: "Earth "seems" nice"

as you can see, the double quote useage in the title, would have ended the string before the end of the actual title. -->

Dedicated to God the Father

This book is created by the
College of Scripting Music & Science.

We have taught over 2 million people how to program
computers for free in a virtual world named Second Life for
over a decade.

Feel free to visit the college and learn scripting in a 3d
Virtual World.

Remember to check the GitHub for the App's latest Version:

[https://github.com/ChristopherTopalian/
TopalianGameEngineDataNavigator](https://github.com/ChristopherTopalian/TopalianGameEngineDataNavigator)

and also check the ScriptingCollege Youtube channel for
more instruction on how to use the application:

www.youtube.com/ScriptingCollege

HAPPY SCRIPTING!

Always Remember that the more Code that you Write with a
Pencil and Paper and Type with your Keyboard, the deeper
you will learn computer programming!
